

16 Functions & Course Syllabus

版本说明 (2026-06-29): 本文档同步荣格斯 2026-v0.81 量表更新。该量表基于荣格认知功能理论, 结合尼斯贝特文化思维理论, 用于测量 16 认知功能和 64 型人格。

A Tentative Syllabus for the Online Course: Personality, Culture, and Career Planning

Chapter 1: Introduction to Perception and Judgment (30 minutes)

Contents: Basic concepts of Perception and Judgment, how it maps in real life, measures, etc.

Primary reference: Psychological Types, Carl Jung; SNTF

1. Basics of Cognitive Functions

1.1 Perception: information acquisition / irrational functions / System I

- 1.1.1 Sensing: concrete perception — 5min
- 1.1.2 Intuiting: abstract perception — 7min

1.2 Judgment: decision making / rational functions / System II

- 1.2.1 Thinking: objective judgment — 6min
- 1.2.2 Feeling: subjective judgment — 6min

1.3 Interaction of Perception and Judgment: A Whole Cognitive Process

- 1.3.1 Examples — 6min
-

Chapter 2: Introduction to Cultural Thinking Differences (45 minutes)

Contents: Concepts on background/object perception and holistic/analytic judgment. Cultural differences and their application.

Primary reference: The Geography of Thought, Richard Nisbett

2. Basics of Cultural Thinking Differences

- 2.1 (details TBD)
-

Chapter 3: 16 Functions and 64 Types in a Nutshell (90 minutes)

Contents: 16 Functions definitions, how they behave in real life, how to pin down your type, retrieval of the 64-type datasets and knowledge pools, etc.

3. Exploring the 16 Functions and Self Rating

- 3.1 Exploring Sensing Functions — 10min
- 3.2 Exploring Intuition Functions — 10min
- 3.3 Exploring Thinking Functions — 10min
- 3.4 Exploring Feeling Functions — 10min

4. Exploring Your Temperament

- 4.1 ST Temperaments: Practitioners and Entrepreneurs — 10min
- 4.2 SF Temperaments: Supporters and Socializers — 10min
- 4.3 NT Temperaments: Thinkers and Trail Blazers — 10min
- 4.4 NF Temperaments: Idealists and Diplomats — 10min

5. Typing Yourself in a Nutshell — 10min

Chapter 4: Career Planning Based on 16 Functions and 64 Type Theory (80 minutes)

Contents: Exploration of the best developing paths of people led by 16 functions. How to better use these functions in real life. 8 temperaments.

Chapter 5: Introduction to Cultural Environments (60 minutes)

Contents: Concepts of the atmosphere of culture, large/small environments, 8 interactive styles of people and culture.

Chapter 6: Taking Culture into Account — Subtler Suggestions in Career Planning (80 minutes)

Contents: Exploration on cultural matching and adaptation, culture selection, and cross-cultural communication.

Extra Contents (for people with more theoretical interests)

- Neuroscientific foundations of cultural thinking and 16 functions
 - In-depth analysis of the INXXXX personality
 - 64 types and Enneagrams
-

16 Functions

Se-O: “Explorer” — Se

One sentence summary: Se-O directly captures the concrete, tangible features of thematic objects with sensory systems, even in a complex background.

Se-O (Object-oriented Extraverted Sensing) is a field-independent perception function that actively perceives and grasps the purely concrete reality by directly using the sensory systems. When acquiring information from the outside surroundings, Se-O would instinctively focus on the thematic objects even within a complex environment with much background information. Se-O loyally perceives the exact, direct and to-the-point features from the objects of interest, such as how it smells, looks and touches. Thus, Se-O users naturally present the characteristics of being attracted by sensational stimuli from the outside world, as well as “going physical” when encountering problems. Se-O users tend to be adventurous and direct.

Usually, Se-O users have higher energy / are more assertive in the **West** than in the East.

- **Trait in the West:** “Mover”
 - **Trait in the East:** “Adventurer”
-

Se-B: “Adapter” — Se

One sentence summary: Se-B captures the features of the outside surroundings and adapts to them by incorporating sensory stimuli from both objects and backgrounds.

Se-B (Background-oriented Extraverted Sensing) is a field-dependent perception function that actively or passively adapts to the immediate surrounding environment by five senses. Se-B tends to perceive the outside surroundings by equally absorbing information from the thematic object and the background. By taking the background into account, Se-B users are very adaptive and sensitive to environments and are able to detect very detailed clues on the properties and change of the “atmosphere” of their surroundings. They are thus good observers of hidden cues even without actively paying attention and behave accordingly. Se-B doms are extremely good at immersing themselves into physical surroundings.

Usually, Se-B users have higher energy / are more assertive in the **East** than in the West.

- **Trait in the West:** “Sensate”
 - **Trait in the East:** “Participant”
-

Si-O: “Clauses” — Si

One sentence summary: Si-O maintains inner physical homeostasis by loyally sticking to habits, rules, traditions, or any other concrete behavioral patterns.

Si-O (Object-oriented Introverted Sensing) is a field-independent perception function that keeps the inner physical homeostasis and sense of safety by sticking to or setting some concrete, exact and detailed behavioral patterns that repeat themselves in a sufficiently long time. Si-O cares about concretion and details, with even a small deviation from the habitual patterns causing strong physical discomfort. Si-O users manage themselves and/or others with rules that are literal and constant even across different scenarios, such as keeping a to-the-minute schedule every day or replicating the rituals exactly following fixed procedures. Thus, they tend to be reluctant to change, and therefore stereotyped as “traditional”. Si-O doms are usually obsessed with keeping a stable, literal, to-the-minute life schedule.

Usually, Si-O users have higher energy / are more assertive in the **West** than in the East.

- **Trait in the West:** “Defender”
 - **Trait in the East:** “Preserver”
-

Si-B: “Comfort Zone” — Si

One sentence summary: Si-B maintains inner physical homeostasis by staying in a comfort zone in which the body and the surroundings fit properly.

Si-B (Background-oriented Introverted Sensing) is a field-dependent perception function that keeps the inner physical homeostasis and sense of safety by keeping a life pattern within an imprecise but stable comfort zone. To form this comfort zone, Si-B accumulates enormous life experiences and forms snapshots of them, and then establishes a meticulous but vague mapping between situations and a continuous set of proper actions. In other words, by generating familiarity, Si-B users would learn what is “appropriate” and “comforting” by absorbing both object and background information and then subconsciously compare whether the object (behaviors) fits appropriately into the background (situation). This is exactly why Si-B users are so sensitive to “implicit norms” of an Eastern society. When having to deviate from this set

or seeing others deviate, they would feel very uncomfortable or even defensive. Si-B users are open to small changes, but very reluctant to get out of their comfort zones. Si-B doms are obsessed with maintaining physical comfort.

Usually, Si-B users have higher energy / are more assertive in the **East** than in the **West**.

- **Trait in the West:** “Hearth”
 - **Trait in the East:** “Implicit Norms”
-

Ne-O: “Conceptualization” — Ne

One sentence summary: Ne-O conceptualizes outside objects through exploring their attributions, and makes links accordingly.

Ne-O (Object-oriented Extraverted Intuition) is a field-independent perception function that abstracts and links the objects in the outside world through attribution description and conceptualization. When acquiring information from the outside world, Ne-O immediately perceives its basic attributes analytically independent from its surroundings (for instance, a vehicle). Synchronously, Ne-O locates established concepts for familiar things and tries to come up with a new concept when meeting something new. Typically, Ne-O users enjoy the process of encountering novel objects and find it particularly interesting to research into its attributes and find good concepts to pin them down. Ne-O doms are born innovators.

Usually, Ne-O users have higher energy / are more assertive in the **West** than in the **East**.

- **Trait in the West:** “Marketer”
 - **Trait in the East:** “Inventor”
-

Ne-B: “Association” — Ne

One sentence summary: Ne-B makes association of outside objects to each other based upon resemblance or connections.

Ne-B (Background-oriented Extraverted Intuition) is a field-dependent perception function that associates objects by resembling or interconnecting. When acquiring information from the outside world, Ne-B would automatically catch its connections with other objects. In the eyes of Ne-B users, many things that seem to be irrelevant are interconnected in their minds. Ne-B enjoys finding these linkages, especially those linkages that are not found yet. By accumulating these experiences, Ne-B users can form a unique understanding of different fields. This is also the reason why Ne-B users tend to have divergent attention, as they tend to drift to other objects from the currently focused object through the perceived linkages. Ne-B doms are born storytellers.

Usually, Ne-B users have higher energy / are more assertive in the **East** than in the **West**.

- **Trait in the West:** “Catalyst”
 - **Trait in the East:** “Storyteller”
-

Ni-O: “Archetype” — Ni

One sentence summary: Ni-O internally constructs archetypes of objects and maintains inner spiritual homeostasis by matching them with external objects.

Ni-O (Object-oriented Introverted Intuition) is a field-independent perception function that exists as a gut sense of conviction and certainty without convincing and describable roots. Usually, this sense comes from a single flash of insights, or a “Eureka” thought. Even though there seems to be no direct supporting facts, it could be a clear vision of the future, an image of a product, or a certain way in dealing with a relationship or a task. As these flashes accumulate, Ni-O users are able to stay inward-focused and store their perception of the world by abstract and symbolic archetypes unconsciously,

independent of the external environment. When encountering new objects and events, Ni-O would automatically throw them into a superposition state. The superposition state strips off the outer shell of things irrelevant to the essence and then collapses it to a conclusion state. As a result, Ni-O might be “stubborn” or “perfectionist” in sticking to one specific route or target, even when it is somewhat hard to explain why it has to be that way verbally. Ni-O doms typically pursue a “Tao” in which their visions could be realized.

Usually, Ni-O users have higher energy / are more assertive in the **West** than in the East.

- **Trait in the West:** “Visionary”
 - **Trait in the East:** “Eureka”
-

Ni-B: “Blueprint” — Ni

One sentence summary: Ni-B internally constructs an abstract blueprint and maintains inner spiritual homeostasis by matching it with the external surroundings.

Ni-B (Background-oriented Introverted Intuition) is a field-dependent perception function that imagines and abstracts an internal blueprint of the world within the subconscious space. Ever since early childhood, an Ni-B user has been inward-focused and started to build the metaphysical abstraction of their own inner universe, in which objects and their linkages are saved as a complex and interconnected entirety. When absorbing new information, Ni-B would automatically apply a holographic style of perception, abstract the objects and the background together as a whole, compare with the inner blueprint, and finally upgrade it, just like an ongoing chess or weiqi game. Synchronically, these snapshots are stored in the mind, offering Ni-B users a deep pool of vague memory of abstract experiences. Thereby, Ni-B users can overlook the big picture of the world from a higher dimension and intercompare it with their inner blueprint. Ni-B doms tend to make their external world resemble their imagined blueprint or narrow the scope of the world in pursuit of better precision.

Usually, Ni-B users have higher energy / are more assertive in the **East** than in the West.

- **Trait in the West:** “Oracle”
 - **Trait in the East:** “Chess Player”
-

Thinking functions have the least variance across cultures. Also, the Extraverted Thinking function has the least field-dependent/independent variance across all eight functions.

Te-A: “Step-by-step” — Te

One sentence summary: Te-A makes measurable goals and methodical plans towards the goal, with the plans being firmly executed and monitored during the process.

Te-A (Analytic Extraverted Thinking) is a field-independent judgment function that uses methodical, step-by-step and direct strategies to solve external problems. When Te-A needs to achieve a goal, it usually defines the goal in a clear and measurable way, independent of the environment. Te-A clearly defines the start state (initial condition), intermediate states (conditions toward the goal), and the goal state. Then, it searches the best operators for each step and forms a methodical plan of action. This plan is usually set to be linear and direct once the planning process is finished. Te-A doms are firm and direct executors and managers.

Usually, Te-A users have higher energy / are more assertive in the **West** than in the East.

- **Trait in the West:** “Manager”
 - **Trait in the East:** “Executer”
-

Te-H: “Pragmatism” — Te

One sentence summary: Te-H makes measurable goals and flexible plans towards the goal, with the plans being dynamically adjusted to changes of the environment.

Te-H (Holistic Extraverted Thinking) is a field-dependent judgment function that uses flexible, tactful and indirect strategies to solve external problems. Te-H is highly outcome-oriented, and usually believes that the end justifies its means. Te-H is also adaptive to the environment, as Te-H users tend to update their plans actively during the process of practicing by taking newly absorbed information from the environment. Such adaptation usually takes a reinforcing or Bayesian style, with positive feedback affirming the current strategy and negative feedback prompting strategic change. Thus, Te-H users may seem making detours and trial-and-errors during long processes, but fundamentally they are doing so for reaching the goals more effectively. Te-H doms are utilitarian pragmatists.

Usually, Te-H users have higher energy / are more assertive in the **East** than in the West.

- **Trait in the West:** “Builder”
 - **Trait in the East:** “Chief”
-

Ti-A: “Deduction” — Ti

One sentence summary: Ti-A understands the world and searches for the absolute truth through deduction from definitions, principles and laws.

Ti-A (Analytic Introverted Thinking) is a field-independent judgment function that uses deductive reasoning to come up with definite conclusions. Ti-A relies on formal logic and syllogism, starts from axioms and laws, and uses a top-down thinking style to reach clear, accurate, and non-exceptional understanding on how the world works. Ti-A believes in “Occam’s Razor”, and tends to rely on simple, clear-cut principles deduced from what they learned and understood, keeping a high logical consistency across different scenarios. That is why we say that Ti-A users are always interpreting the world using their inner logical system, and tend to be very assertive when they believe it is “right”, or “the only truth”. Ti-A doms are born to search for the truth.

Usually, Ti-A users have higher energy / are more assertive in the **West** than in the East.

- **Trait in the West:** “Ideologue”
 - **Trait in the East:** “Logician”
-

Ti-H: “Induction” — Ti

One sentence summary: Ti-H understands the world and searches for relative truth through induction from observation and accumulation of evidence and data.

Ti-H (Holistic Introverted Thinking) is a field-dependent judgment function that uses inductive reasoning to come up with probabilistic conclusions. Ti-H relies on specific observation and evidence, trying to reach conclusions of the highest likelihood of how the world works. Since these observations and indicators are usually sensitive to the environment, Ti-H are more adaptive to the surroundings and tend to update their thinking models frequently by accumulating new knowledge and analyzing the situation. Ti-H users usually come up with their conclusions based on their pool of knowledge, and then draw out a probably true logical explanation that supports their conclusion and does not contradict what is known to be true. This is why Ti-H users are more flexible across situations, as their reasoning mode is highly dependent on their surroundings. Typically, Ti-H users are comfortable with dialecticism. Ti-H doms are easy-going, tactful and pragmatic.

Usually, Ti-H users have higher energy / are more assertive in the **East** than in the West.

- **Trait in the West:** “Systemist”
- **Trait in the East:** “Tactician”

Framework for Feeling Functions

Feeling functions are the most difficult to analyze, as their understandings have the highest variance across people and cultures. In the Jungus System, we define feeling functions based on two supplementary concepts: **Roots of Values**, and **Compassionate Balance**.

Concept: Root of Values

The Root of Values describes how value systems are constructed, determining a fundamental theme of who to care about, and what values to hold. An **internal**, or an **independent** root of values, is formed within the person and does not rely on social relationships and the outside environment. On the contrary, an **external** root of values is formed by absorbing and accumulating the social norms, roles and needs of others, which could not exist without the outside environment.

Concept: Compassionate Balance

The Compassionate Balance describes how the feeling functions users get psychic energy, determining under what circumstances the feeling function would be positively or negatively responded to. An **internal**, or an **independent** compassionate balance relies on within-the-person compassionate balance. People with such features (Fi users) make choices and behave according to their own heartbeat, seeking inner harmony without fundamental need of positive external feedback, despite that external feedback is still encouraging. In other words, Fi users would do something “purely for their own inner harmony”. On the contrary, an **external**, or an **interdependent** compassionate balance relies on interpersonal reaction and feedback. People with such features (Fe users) make choices and behave according to the needs of other people, which can be one person, a small group or a large population. They actively respond to these needs and expect appropriate feedback, with neither side “owing” its partner. In other words, the harmony that Fe users search is outside the inner world, thus interdependent with the outside world.

Summary:

	Internal / Independent Roots	External / Interdependent Roots
Internal / Independent Balance	Fi-A, Fi-H	(Fi-X)
External / Interdependent Balance	Fe-A, Fe-H	(Fe-X)

Fe-A: “Intimacy” — Fe

One sentence summary: Fe-A forms intimacy and a balance of emotional interaction between the subject and others independent from the macro environment.

Fe-A (Analytic Extraverted Feeling) is a field-independent judgment function that builds inner values from refining and exploring the inner world and then pursues balanced interaction with other people accordingly. In other words, Fe-A has an **internal root of values but seeks external compassionate balance**. Fe-A starts from inner values and passion, which usually rest upon how the subject empathizes with or sympathizes with the needs of particular individual(s) or groups. For Fe-A users, this pathway is typically independent of social values. As long as Fe-A users fix the persons of interest, they would pursue an intimate relationship between these people and themselves. In this relationship, Fe-A pours their love into who they care for selflessly and loyally, but they also expect their effort to be accepted, cherished, and reciprocated. In real life, this intimacy usually occurs as (most commonly) romantic love, family love, or confidant friendship. However, in some cultures, this intimacy could also be a bond between an individual and a large group, with the latter usually being an underrepresented social group. The key common feature is that Fe-A users and their partner(s) are highly interdependent within the intimate relationship but independent of other people or the environment outside the relationship. Fe-A doms actively meet the needs of others and meanwhile pursue control within these relationships. Typically, Fe-A users are intermediates between individualists and collectivists. They have both independent and interdependent self-construals.

Usually, Fe-A users have higher energy / are more assertive in the West than in the East. The deviance is so salient that the outward traits, or social roles, are the opposite in the West and the East.

- Trait in the West: “Shepherd”
 - Trait in the East: “Host”
-

Fe-H: “Harmony” — Fe

One sentence summary: Fe-H absorbs social values and the holistic interpersonal environment and makes decisions accordingly, taking complex interpersonal bonds into account.

Fe-H (Holistic Extraverted Feeling) is a field-dependent judgment function that builds values by absorbing social values and the needs of others and then pursues balanced interaction with other people accordingly. In other words, Fe-H has an **external root of values as well as an external compassionate balance**. Fe-H tends to care about social values and establish social harmony within groups. They tend to immerse themselves into their social groups and responsibilities and care about the group as a whole, with interpersonal relations within the group firmly taken into account. Thus, when they make decisions, they usually try to meet the needs and expectations of their group, and more importantly, their empathy on the others’ needs are dependent on their social roles and the relations among their group members. In other words, Fe-H harmonizes a group with appropriately allocated empathy, and maintains the social roles of every member. This concern for relational harmony makes Fe-H users have collectivistic values and relatively indirect and euphemistic communicating style. Fe-H doms actively harmonize complex human relationships and solidify collective values.

Usually, Fe-H users have higher energy / are more assertive in the East than in the West. The deviance is so salient that the traits, or social roles of Fe are the opposite in the West and the East.

- Trait in the West: “Host”
 - Trait in the East: “Shepherd”
-

Fi-A: “Independence” — Fi

One sentence summary: Fi-A explores the self and forms principles and values and behaves accordingly, trying to reach self-consistency even in different situations and environments.

Fi-A (Analytic Introverted Feeling) is a field-independent judgment function that builds inner preferences and values from refining and exploring the self independently. In other words, Fi-A has an **internal root of values as well as internal compassionate balance**. Fi-A keenly explores the self and establishes solid and stable values independent of what other people think of, and then forms abstract value principles which do not vary across situations. They have the tendency to believe in universalism and abstract values such that what they believe should be “right” or “good” regardless of the specific scenarios. Thus, Fi-A users tend to use abstract personality traits, such as brave, quiet and conscientious to describe themselves when asked to say “who they are”, and pursue self-consistency across most situations. Fi-A doms are firmly individualistic and stick to their own values and principles.

Usually, Fi-A users have higher energy / are more assertive in the West than in the East. The deviance is so salient that the traits, or social roles of Fi are the opposite in the West and the East.

- Trait in the West: “Quester”
 - Trait in the East: “Romantic”
-

Fi-H: “Heritage” — Fi (The most complicated function)

One sentence summary: Fi-H inherits, accumulates and reassembles the values from the macro environment to form self-principles that rely on the narratives of the environment.

Fi-H (Holistic Introverted Feeling) is a field-dependent judgment function that builds inner values from inheriting, accumulating and reassembling the values from the outer macro environment. In other words, Fi-H has an **external root of values but pursues inner compassionate balance**. The “external” root of Fi-H could be either abstract or concrete, and highly variant across cultures. In some cultures, Fi-H roots in grand concepts such as history, culture, nation and collective will; in other cultures, however, Fi-H may root in much finer narratives, such as naturalistic beauty and hometown memories. Accumulating these outer narratives, Fi-H understands who they are, such as “I am a Chinese” or “I am a Texan”; and then, learning and exploring what it means to be like this, such as “I should strive for the National Revival” or “I should make America/Texas great again”, and finally builds their personal values and acts accordingly. Such a way is usually stable, but would still be subjective to change when the outside narratives are substantially changed. Although Fi-H users keep updating their value systems by accumulation from the outside world, they make judgments based on internal compassionate balance, not necessarily caring about interpersonal interaction of feelings and emotions. Thus, Fi-H is still not Fe. Typically, Fi-H users are intermediates between individualists and collectivists. They have both independent and interdependent self-construals. Fi-H doms are loyal defenders of “culture-specific” values.

Usually, Fi-H users have higher energy / are more assertive in the East than in the West (except for Red states in the USA). The deviance is so salient that the traits, or social roles of Fi are the opposite in the West (except for Red states in the USA) and the East.

- Trait in the West: “Romantic”
- Trait in the East: “Quester”

荣格原著讨论 IE 与 OB/AH 倾向

以下内容回到荣格原著，讨论内倾/外倾（IE）与场独立/场依存（OB/AH）的关系。

在歌德（Goethe）的直觉中就呈现为（心脏）收缩（systole）和（心脏）扩张（diastole）这个无所不包的原则。外倾和内倾的机制曾被赋予各式各样的名称和概念，这些名称和概念往往只适用于个别观察者的观点。尽管阐述各有千秋，但还是有一个共同的基本观念贯穿其中，亦即外倾的兴趣是朝客体做外向运动，内倾的兴趣则是脱离客体，朝主体和他自己的心理过程运动。

在前一种情况中，客体就像磁铁般作用于主体的倾向，因此客体在很大程度上决定了主体，甚至使主体疏离自己。由于与客体同化，使他的属性也受到改变，客体对于主体可说具有高度甚至决定性意义，仿佛成为绝对的决定物，成为生命的特殊的目的或命运，要他必须彻底投身于客体。

但在后一种情况下，则主体成了所有兴趣的中心，他所有的生命能量最终似乎都在寻求主体，因而客体始终无法施展强力的影响。能量仿佛已从客体中流走，主体有如一块磁铁，把客体吸引过来了。

要想用通俗易懂的方式来描绘这种与客体的双向关系实非易事，甚至还可能得出一些吊诡的阐释来，制造更多的混乱而不是清晰。但大致上我们可以说，内倾的观点是把自我和主观心理过程置于客体和客观过程之上，或者无论如何都固守自己的阵地以抵御客体。因此，这一态度给予主体的价值要比客体高得多，客体只具有次等的重要性；有时它仅代表主观内容的外在标志，作为观念的体现，其中观念才是本质的因素；或者有时它只是作为情感的体现，那么同样地，是情感而非客体本身才是主要的东西。

相反，外倾的观点则把主体置于客体之下，使客体获得占据优势的价值，主体则只具有次等的重要性；主观过程有时显得只不过是客观事件的骚扰因素或多余的附属品。很明显，这些对立观点所产生的心理必须被区分为两种完全不同的倾向。一种是从自己的角度来看待一切事物，另一种则从客观事件的观点来看待一切。

这些对立态度本身只不过源自两种相关机制：（心脏）扩张者四处出击，捕捉客体；而（心脏）收缩者则使能量内敛，脱离被捕捉到的客体。每个人都同时具有这两种表现天性的生命节奏的机制，这种节奏被歌德用心脏活

动的生理学概念（当然并不是偶然的）给生动地刻画出来了。这两种心理活动形式有节奏的替换，或许与正常的生命过程相对应。

但是，我们生活于其中的复杂外在情境，以及更为复杂的、我们个人的心理构成状况，都很少允许我们的心理能量流完全不受干扰。外在情境和内在气质经常会偏向某一机制，限制或阻碍另一机制；因此前者自然会占优势。如果这一状况变成长期固定性的，那么类型就产生了，换句话说，即产生一种习惯性的态度，由一种机制长久占据统治地位；当然，另一机制也并非完全遭到压抑，因为它仍然是心理系统（psychic economy）中不可或缺的因素。所以绝不会产生纯粹的类型，完全被一种机制所占领，而另一机制却枯竭殆尽。一个类型态度总是仅仅意味着某种机制相对占据了优势。

回到荣格原著讨论 IE 和 OB/AH 倾向

在原著中荣格讨论 IE 的时候，其实是有明显地暗含“OB/AH”倾向的：

“（心脏）扩张者四处出击，捕捉客体；而（心脏）收缩者则使能量内敛，脱离被捕捉到的客体。”

前者明显展现出一种将客体和环境融为一体的倾向；而后者展现出主体和客体之间更高的分离性。

“内倾的观点是把自我和主观心理过程置于客体和客观过程之上，或者无论如何都固守自己的阵地以抵御客体。因此，这一态度给予主体的价值要比客体高得多，客体只具有次等的重要性；有时它仅代表主观内容的外在标志，作为观念的体现，其中观念才是本质的因素；或者有时它只是作为情感的体现，那么同样地，是情感而非客体本身才是主要的东西。相反，外倾的观点则把主体置于客体之下，使客体获得占据优势的价值，主体则只具有次等的重要性。”

以上观点中，荣格本人倾向于是将“外倾”和“场依存”，以及“内倾”和“场独立”进行了暗地中的等价化的。

这也是相对来说比较好理解的。重视主体而非客体的模式，作用于自身，就是内倾；重视客体而非主体的模式，作用于自身，就是外倾。一般来说人们同时存在两种模式，属于内倾和外倾哪个类型，主要视其核心追求方向和使用模式频率而定。内倾的人更加看重自我和主观心理过程，而外倾的人更加看重外部的客体价值。这一说法是合理的，也是同时符合荣格心理学和主流心理学观点的。

然而，这个“主体 vs 客体”的模式，如果作用于外界环境而言，其结果未必和作用于自身的方式完全对称。也就是说一个人对待自己可能更加偏好采取内倾的态度，但感受和对待外界环境的时候却更加偏好采取重视客体而非主体的模式，反之亦然。这可能是在进化中采取的一种制衡性的态度。

对于更加偏好内倾的人而言，有时为了更好地维护内心的稳态或价值，他们面对复杂多变的环境，或采取一种主动适应和调节的策略，即把自己的“外在”暂时交托于环境和外界，从而换取更好的“自保空间”，以守护自己根本的阵地（而非外在的、表现的阵地）能够抵御客体对这个更深层区域的侵袭。

这种模式就是“内倾 + 场依存模式”，我们可以称作“种田”，更高级一点的版本则是“内圣外王”。

而对于更加偏好外倾的人而言，他们也并非何时都会主动适应环境和以外在客体为主，相比之下，他们会按照更适合自己的偏好的模式主动出击，改造外在的客体，让外界客体服从于独立于环境的标准。这样的话，他们就可以更加有效地达成自己“外倾”层面上的需求。

这种模式就是“外倾 + 场独立模式”，我们可以称作“航海”，更高级一点的版本是“我即万物”。

正如“种田”和“航海”两个字的字面意思，前者在东方的、以农耕为历史基准的社会中更加普遍，而后者在西方的、以狩猎航海为历史基准的社会中更加普遍。

有一些已有的证据表明二者之间可能存在相关性，但未必存在因果性，也有大量的实例表明这一相关性不足以将他们视为同一维度。在美国人做的量表“self-monitoring”量表里面，很多问题围绕着人是不是具备着在不同场合之间“变色龙”的倾向（典型的 H-A 倾向），它的确和外倾有中等相关（0.3 左右）。

IE × OB/AH 太极模型

本身这个黑白二元的方法，放到人类认知的太极图里面，其实是忽略掉了“少阳”和“少阴”的。

阳：内倾	
太阳：内倾 + 场独立	少阴：内倾 + 场依存
少阳：外倾 + 场独立	太阴：外倾 + 场依存
阴：外倾	

(具体内容仍待塑造)
