

Jungus Tests CN v1.0 Public Record

1. Identification

- Work title: Jungus Tests CN
- Chinese title: 荣格斯中文版认知功能测试
- Included assessments:
 - Jungus Professional Test CN / 荣格斯专业版认知功能测试
 - Jungus Standard Test CN / 荣格斯标准版认知功能测试
- Version: v1.0 public record
- Language: Simplified Chinese
- Public record date: 2026-06-26
- Publisher / author: Jungus 荣格斯团队
- Website: <https://www.jungus.cn>

This document is a public priority and citation record. The Chinese item text may be published separately as:

- `Jungus_Professional_Test_CN_v1.0_items.md` / `Jungus_Professional_Test_CN_v1.0_items.pdf`
- `Jungus_Standard_Test_CN_v1.0_items.md` / `Jungus_Standard_Test_CN_v1.0_items.pdf`

This record does not publish item-to-dimension mappings, scoring weights, reverse-keying rules, backend code, prompt templates, databases, logs, user data, or report-generation logic.

2. Purpose

The Jungus Professional Test and Jungus Standard Test are Chinese cognitive-function assessments developed by the Jungus team.

The professional version is designed to measure fine-grained differences within traditional 16-type personality categories and supports the Jungus 16-function and 64-archetype model.

The standard version is a lower-load assessment intended for easier public use while preserving the core cognitive-function measurement direction.

3. Theoretical Structure

The Jungus model keeps the classical MBTI and Jungian function vocabulary as a reference point, but extends it by introducing two additional preference dimensions:

- Object-Background preference for perceiving functions.
- Analysis-Holism preference for judging functions.

These dimensions produce 16 Jungus cognitive functions and 64 personality archetypes.

4. Public Item Text

This public record may include the Chinese item text of both the professional and standard tests.

Published item-text files contain only question stems and answer options. They do not contain:

- item-to-function mappings;
- item-to-dimension mappings;
- scoring weights;
- reverse-keying rules;
- normalization logic;
- backend algorithm;
- AI prompt templates;
- result-generation rules;
- user data.

5. Protected Materials Not Disclosed

The following materials are not published in this repository:

- scoring mappings;
- scoring weights;
- reverse-keying rules;
- backend scoring implementation;
- AI interpretation prompt templates;
- report-generation rules;
- user data;
- private database materials;
- internal research notes.

These materials remain protected as copyrighted works, software, confidential know-how, and trade-secret materials of the Jungus team.

6. Checksums

The repository includes `checksums.sha256`, which records SHA-256 hashes of selected source/private files and public-record artifacts preserved by the authors.

These hashes serve as evidence that the corresponding files existed in a fixed form at the time of this public record.

7. Rights Notice
